

BYCROSS

NEXT GENERATION ATHERECTOMY CATHETER

BYCROSS is designed for the percutaneous transluminal treatment of acute, subacute and chronic occluded peripheral vessels, in stent stenosis, artificial and native Bypass.

2 INDICATIONS

Atherectomy and Thrombectomy - One device

STENOSIS, OCCLUSION AND CTO

- Drilling tip allows front cutting and lesion passage with and without guidewire
- Expandable tip delivers two lumen sizes with one catheter to further enlarge the true lumen

INJECTION PORT

Allows the application of contrast media to visualise the treated vessel segment without removing the catheter

DEBRIS REMOVAL

Integrated pump for continuous aspiration

EASY TO USE

Simple set up preparation

COST EFFECTIVE

No capital equipment or dedicated procedural accessories required
